Lab 1: Requirements Table - Podcast Guest Scheduling & Outline Builder

Aryan Upadhyay | SRN: PES1UG25CS806 | Section C | Software Engineering (UE24CS341A)

Scenario: Problem Statement #60 (Media, Events & Community): a media production organizer that lets podcast hosts share booking availability, collect guest talking-point outlines, and generate timestamped run-of-show episode production notes. Actors: Podcast Guest, Show Host.

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Review Comments (revision made)
FR-001	Functional	The system shall allow guests to select interview time slots and submit structured bullet points for discussion topics with biography links.	High	Pass: slot booked, calendar invite sent, and topic outline attached to the episode board. Fail: booking permitted on a blocked date.	Core purpose of the system: one step books the guest and captures what they will talk about.	Given in the problem statement. Kept the pass/fail wording as provided.
FR-002	Functional	The system shall allow the show host to publish recording availability as time slots (date, start time, duration, time zone) and to block dates.	High	Host creates a 60-minute slot for Tue 10:00 IST; it appears on the guest booking page within 5 s, shown in the guest's own time zone. A blocked date shows no bookable slots.	Guests can only book times the host has actually offered.	Added time zone handling: guests and hosts are often in different countries.
FR-003	Functional	The system shall send a calendar invitation to both the host and the guest when a slot is booked, and an updated invitation when the booking is rescheduled or cancelled.	High	Within 1 minute of booking, both host and guest receive an invite with the correct date, time, episode title and recording link. Rescheduling updates the existing event instead of creating a duplicate.	Prevents missed or double-booked recordings.	"Send a reminder" was vague; now names who receives it and when.
FR-004	Functional	The system shall let the host review all guest outlines on an episode board, reorder topics, and set a planned duration for each segment.	Medium	Host moves topic 3 above topic 1 and sets it to 5 min; after saving and reloading the board the new order and duration are kept, and the guest's original submission is still viewable.	The host shapes the episode flow before recording.	Added "original submission kept" so the guest's input is never lost.
FR-005	Functional	The system shall generate a timestamped run-of-show for an episode, computing each segment's start time from the planned durations, and export it as a PDF production sheet.	High	For segments Intro 2 min, Topic A 10 min, Topic B 8 min, Topic C 5 min, Outro 3 min, the PDF shows start times 00:00, 00:02, 00:12, 00:20, 00:25 and a total length of 28:00.	Gives the host and producer a single sheet to follow while recording.	Made the acceptance test a worked example with exact expected timestamps.
NFR-001	Nonfunctional (Performance & Security)	The system shall compile submitted guest topics into a formatted PDF production sheet in under 1 second, and only the episode's authenticated host shall be able to generate or download it.	High	Pass: benchmark of 100 episodes with up to 20 topics each, under a simulated peak load of 50 concurrent requests, gives a 95th-percentile generation time below 1 s, and requests without a valid host login receive HTTP 401/403. Fail: any of these not met.	Hosts often generate the sheet minutes before recording; the sheet contains guests' personal details.	Given in the problem statement. Reworded as "The system shall...", added load level, percentile and the security check.

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Review Comments (revision made)
NFR-002	Nonfunctional (Security & Privacy)	The system shall protect guest booking links and personal data: links use unguessable tokens (at least 128-bit) and expire after booking or 14 days, guest contact details are visible only to that episode's host, and all traffic uses HTTPS.	High	A used or 15-day-old link shows "Link expired"; another host's account receives HTTP 403 when opening the episode; a scan finds no plain-HTTP endpoints.	Guests share email addresses and personal bios; leaked links would allow fake bookings.	Split "secure the system" into three checks that can each pass or fail.

Actors

Actor	Kind	Goal
Podcast Guest	Primary (person)	Books an interview slot and submits talking points and biography links.
Show Host	Primary (person)	Publishes availability, reviews outlines, and produces the run-of-show.
Calendar Service	Secondary (external system, e.g. Google Calendar)	Delivers calendar invitations to host and guest.

Use Cases

ID	Use Case	Actor	Traces to
UC-01	Manage Availability	Show Host	FR-002
UC-02	Book Interview Slot	Podcast Guest	FR-001, NFR-002
UC-03	Submit Topic Outline	Podcast Guest	FR-001
UC-04	Send Calendar Invite	Calendar Service	FR-003
UC-05	Join Waitlist	Podcast Guest	FR-001 (no free slot)
UC-06	Review Episode Board	Show Host	FR-004
UC-07	Generate Run-of-Show PDF	Show Host	FR-005, NFR-001
UC-08	Compute Segment Timestamps	(internal)	FR-005

Relationships: UC-02 Book Interview Slot «include» UC-04 Send Calendar Invite (always sent on booking). UC-07 Generate Run-of-Show PDF «include» UC-08 Compute Segment Timestamps. UC-05 Join Waitlist «extend» UC-02 (only when no free slot is available).
